### Quick Overview

---

This book covers many classical and interesting cases of exfoliative cytology. The book is written in the form of multiple choice questions (MCQs); and, therefore, it will help the students and the cytology practitioners to learn and self-evaluate. In each case author had discussed the diagnostic points and differential diagnosis along with salient immunocytochemistry.

---

### Key Features

- In this book 215 real cases of exfoliative cytology have been discussed.
- Patient's clinical details and multiple microphotographs have been provided in every case.
- The diagnostic features and differential diagnosis have been discussed in each case.
- Special emphasis was given on cervical cytology and abundant microphotographs of liquid based cytology (LBC) have been provided.
- This will be a great help for those who wish to be acquainted with LBC. In addition, recent classification of lung tumors and urinary cytology have been highlighted in detail. Overall this book will be very helpful for learning exfoliative cytology on case by case basis.
